Systems Programming	Web Development	Graphics and Multimedia

ACTIVITIES

College Project: Health App, Lexington, KY
Creator   March – May 2021
- Used Apple's open source CareKit to design and create a functional health UI in swift.
- Created a login view using MVVM that verified user information in the login ViewModel with the information stored in Parse-Hippa server.

Intern Project: Virtual Influencer Interface, Dianthus Commerce
Front-End Developer   March-August 2022
- Created a User Interface for a face-generation tool, which allows the generated influencer on a background as well as a product image.
- Used Link-State Routing to handle user input and pass JSON objects into each webpage.

College Project: Business Database, Lexington, KY
Team Member   March 2021
- Created a mySQL table for a theoretical food truck to use for a food delivery service.
- Wrote python code to execute mySQL commands to create custom emails for customers that have not made orders in the past month.

College Project: Design of a Network Private Remote Folder, Lexington, KY
Team Member   April 2021
- Created a private, shared folder using socket programming to establish a connection.
- Used Python to create a server and a client that can upload, remove, edit, download, and delete files in a directory.

RELEVANT EMPLOYMENT HISTORY

Dianthus Commerce, Remote   March – August 2022
Front-End Development Intern
- Used ReactJS to create interfaces for internal AI tools used by the marketing team.
- Collaborated with a team of interns to create a new product line for one of the company's brands.
